

The background of the slide is a photograph of the main entrance of the National Technical University of Ukraine "Kyiv Polytechnic Institute". The building is a grand, classical-style structure with multiple levels of arches and columns. At the top of the facade, there is a pediment with the Latin inscription "PATRIAE DECORI CIVIBUS". Two large statues of female figures in classical robes stand on pedestals in front of the lower arches. Two vertical banners are hanging from the upper part of the building. The banner on the left is white with a geometric pattern and text in Ukrainian, including "Академічний конкурс «Національний інженерно-технологічний університет» АРАМС - 2015" and "24.05 вересня". The banner on the right is blue and white, featuring a portrait of a man and the text "150 РОКІВ" and "Академічний конкурс «Національний інженерно-технологічний університет» АРАМС - 2015".

# University Study Platform

Created by team ASP 44

## Team members and responsibilities

**Nazar Hrubiy**

Fullstack Developer &  
Tester

**Ksenia Hovorun**

Fullstack Developer &  
Project Manager

**Andrii Kuzmych**

Fullstack Developer &  
UI Designer

# Project Overview

- University platform designed to facilitate interaction between students and faculty
- Allows uploading, storing, and checking homework
- Ability to assign tasks and individual tasks to students
- System of messages between users

# Project Goals and Planning

## Goals & objectives

The system aims to achieve the following:

- Provide a user-friendly UI/UX.
- Digitalize all key aspects of learning and communication between participants in the educational process.
- Implement a centralized database to store student records, grades, and schedules.
- Provide real-time updates for student progress and academic records.
- Integrate role-based access control (students, teachers, administrators).

## Problems to solve

Our system aims to address the following problems:

1. Inefficient student data management.
2. Lack of centralized course and assignment tracking.
3. Unstructured communication between students and teachers.
4. Scheduling conflicts and lack of real-time updates.
5. Absence of automated reporting.
6. Time-consuming evaluations.

## Expected outcomes

The system will provide the following benefits:

1. A centralized platform.
2. A user-friendly web interface.
3. Convenient communication.
4. Reduced administrative workload.
5. Improved academic performance tracking.
6. Enhanced security.

# Target audience & stakeholders

Stakeholder	Role & Interest in the System
<i>University Administration</i>	Seeks to improve efficiency in student management, reduce staff workload.
<i>Teachers &amp; Faculty</i>	Require tools to manage courses, track student performance, and communicate with students efficiently.
<i>Students</i>	Expect a user-friendly platform for tracking academic progress, assignments, and communication with teachers.
<i>Development Team</i>	Responsible for system development, security, and maintenance.

# Projects constraints

Constraint	Description
<i>Time Constraints</i>	The project must be completed within the allocated development timeline.
<i>Team Size Constraints</i>	The development team size is limited, which may affect the speed of development and require prioritization of core features.
<i>Budget Constraints</i>	Limited financial resources may affect third-party integrations. Free and open-source technologies are prioritized.
<i>Technology Constraints</i>	The system must be developed using web-based technologies.
<i>Security &amp; Compliance Constraints</i>	The system must ensure secure storage of personal records.
<i>User Accessibility Constraints</i>	The platform must be accessible across different devices.
<i>Performance Constraints</i>	The system should ensure low latency and high availability, but infrastructure limitations may affect performance under high traffic.

# Requirements and Engineering

## Functional requirements

- Account management.
- Assigning students to groups.
- Assigning instructors to subjects and courses.
- Class schedule management.
- Assignment management.
- Student assessment.
- Managing individual student assignments.
- Course messaging.
- Student performance analysis.
- Assessment method management.

# Non-functional requirements

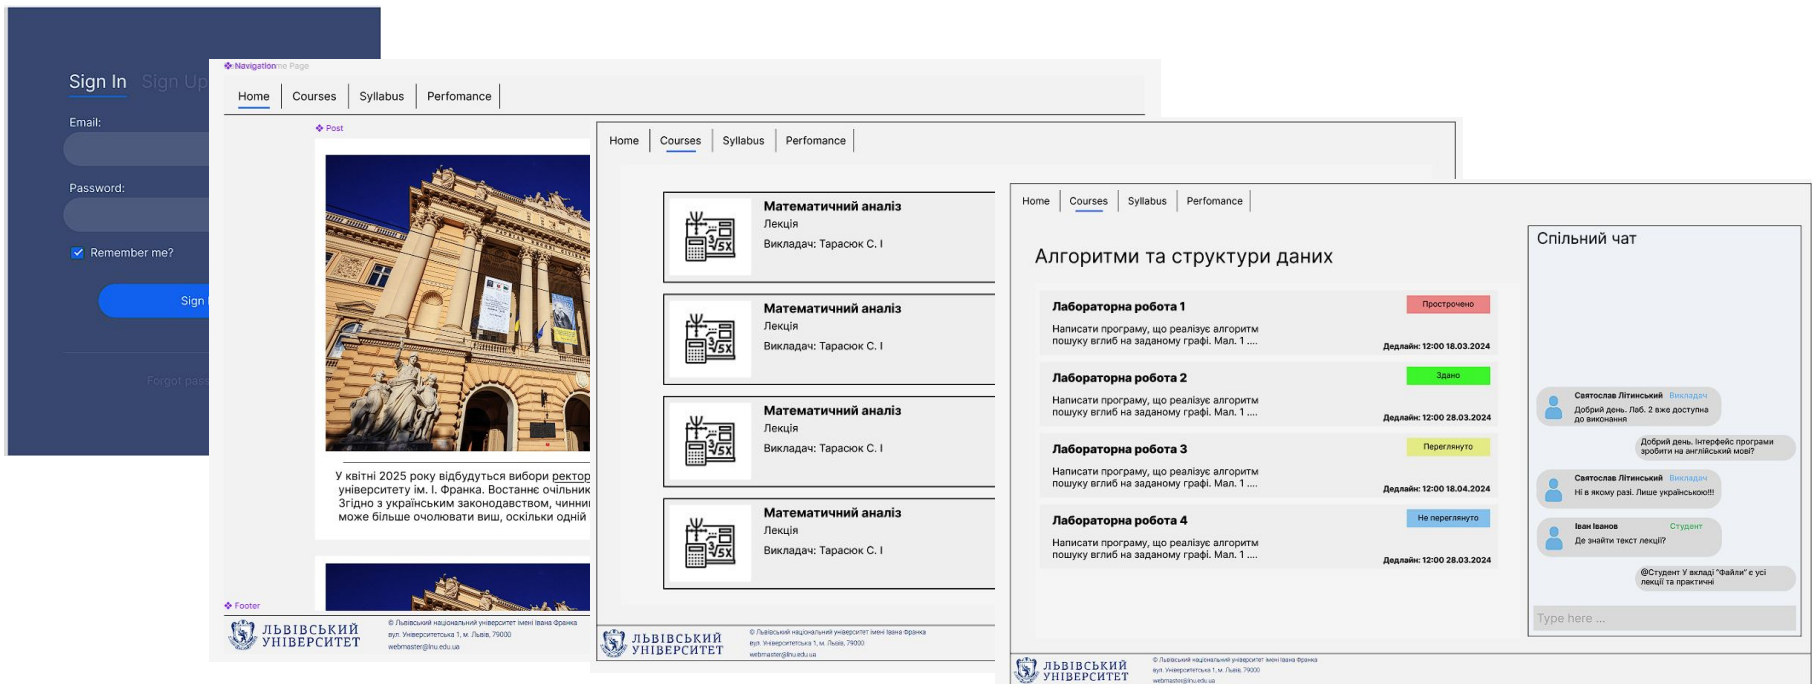

Main requirements:

- Web-Oriented Architecture.
- Performance.
- Security.
- Portability.
- Usability.

# Use Case diagram

# UI / UX Design and Prototyping

# Project schedule - GitHub
